

## 1st Newsletter

Co-funded by  
the European Union

2021-1-FR01-KA220-VET-000025698

We are excited to bring you the first newsletter of the AISkills4CT project, where we aim to enhance the knowledge and competences of agri-food professionals in the application of AI technologies for circular business models. We have made significant progress and are eager to share our updates with you!

### Pedagogical Scenarios and Methodological Framework Design

Our first project result, "Pedagogical scenarios and methodological framework design", focuses on benchmarking good practices and designing tailored learning pathways for interactive virtual training.

By taking into consideration the diverse backgrounds and skills of agri-food professionals, we aim to deliver a training programme that meets their specific needs and expectations.

This innovative approach will lead to unique and effective digital AI and circular economy learning courses.

We expect the benchmarking analysis to provide valuable recommendations for the development of the AISkills4CT programme.

### Tailored Pedagogical Content Development

To ensure a common vision and high-quality pedagogical approach and content, we are working on our second project result, "Tailored Pedagogical Content Development".

This result focuses on developing tailored training programme content aligned with the specifications set in the previous project result.

Our aim is to provide concrete knowledge and skills to agri-food professionals through three foundation e-courses:

- AI applied to the agri-food sector;
- CE principles applied to the agri-food sector;
- Circular Human Resources Management.

We will also explore the opportunities to use AI technologies to facilitate CE models implementation. The modules developed will empower agri-food professionals to adopt proactive behaviors and rethink their business models towards a 4.0 transition. This result will include the creation of multimedia modules and their integration into the e-learning platform.

### Next Steps

Once we have completed the development of the tailored multimedia modules on AI and CE and integrated them into the e-platform, we will move forward with the third project result: the actual implementation and launch of the training programme to the entire group of learners. We are thrilled to reach this milestone and provide agri-food professionals with the tools and knowledge they need to embrace a circular transition!

On the other hand, in the coming months, we will hold our 4th transnational meeting in Spain, with the support of the Spanish partner organisation FIAB. This meeting will bring together project partners to discuss progress, exchange ideas, and plan for the future stages of AISkills4CT.

To stay up to date with the latest news and developments of AISkills4CT, make sure to visit our project website, where all the resources will be available for reference and use. We also encourage you to follow us on social media and join our community to actively engage in the discussion.

Together, we are driving innovation and empowering agri-food professionals to thrive in a digital and circular economy!
